1

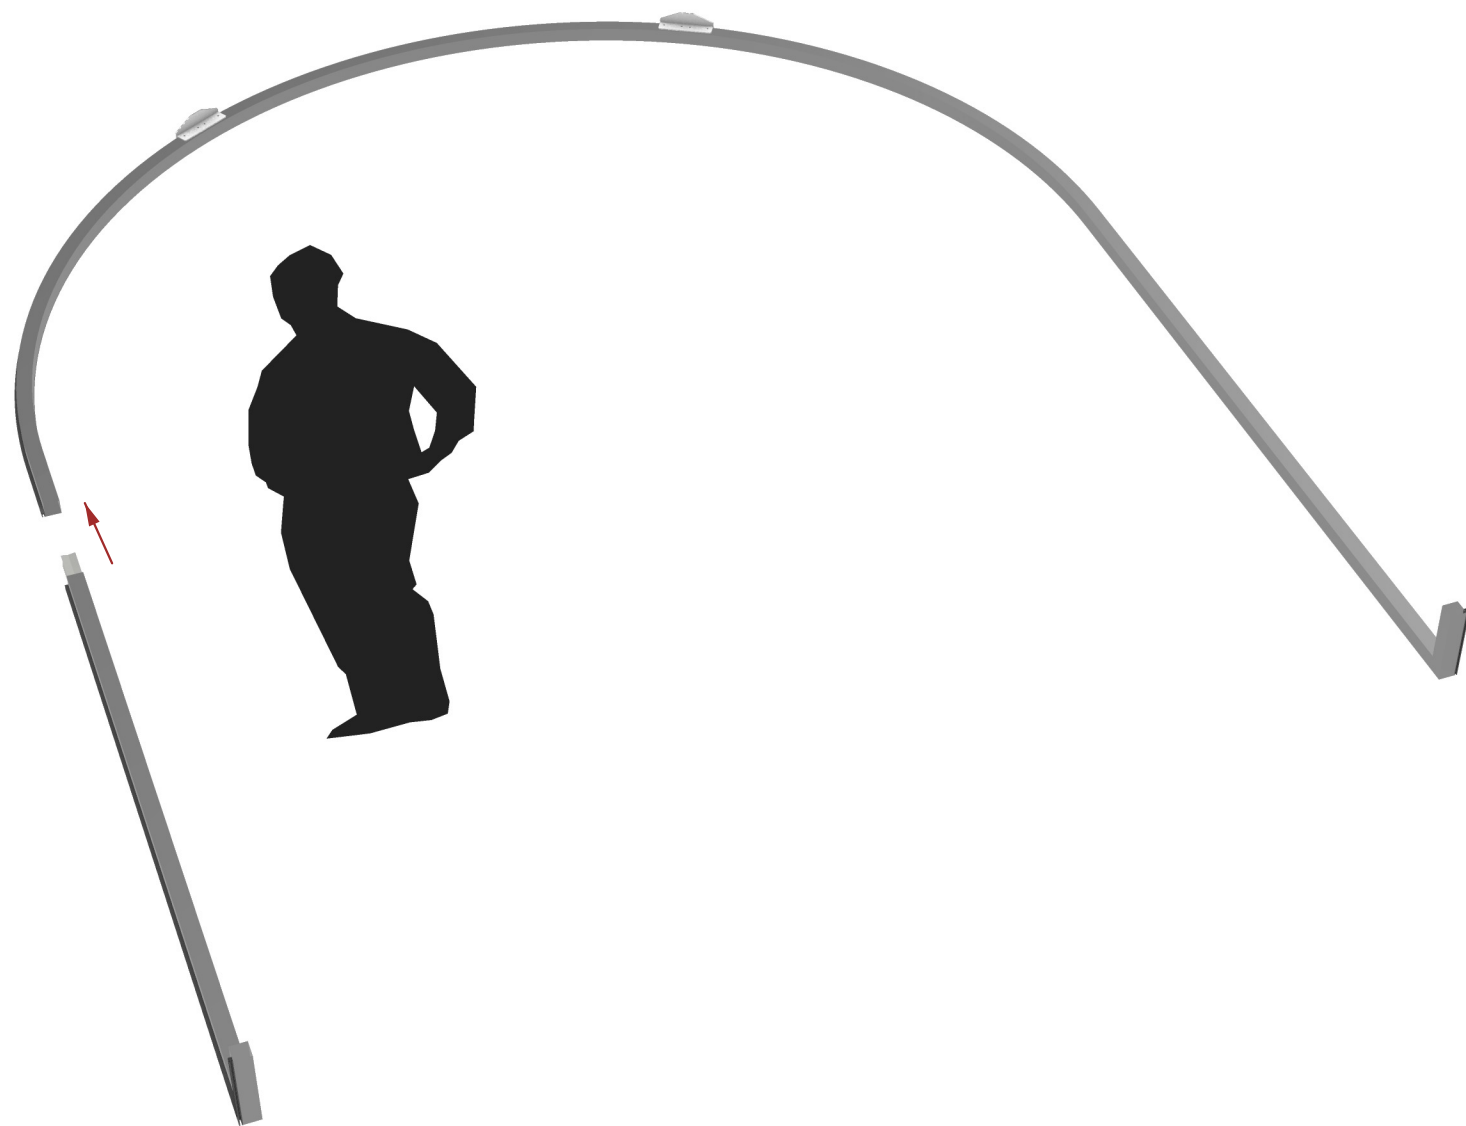

Unpack all the frame segments, and familiarize yourself with the parts and labeling system. Leave the frame unassembled at this time.
Do a cursory examination of frame to check for any signs of obvious damage before assembly.

Perspective

2

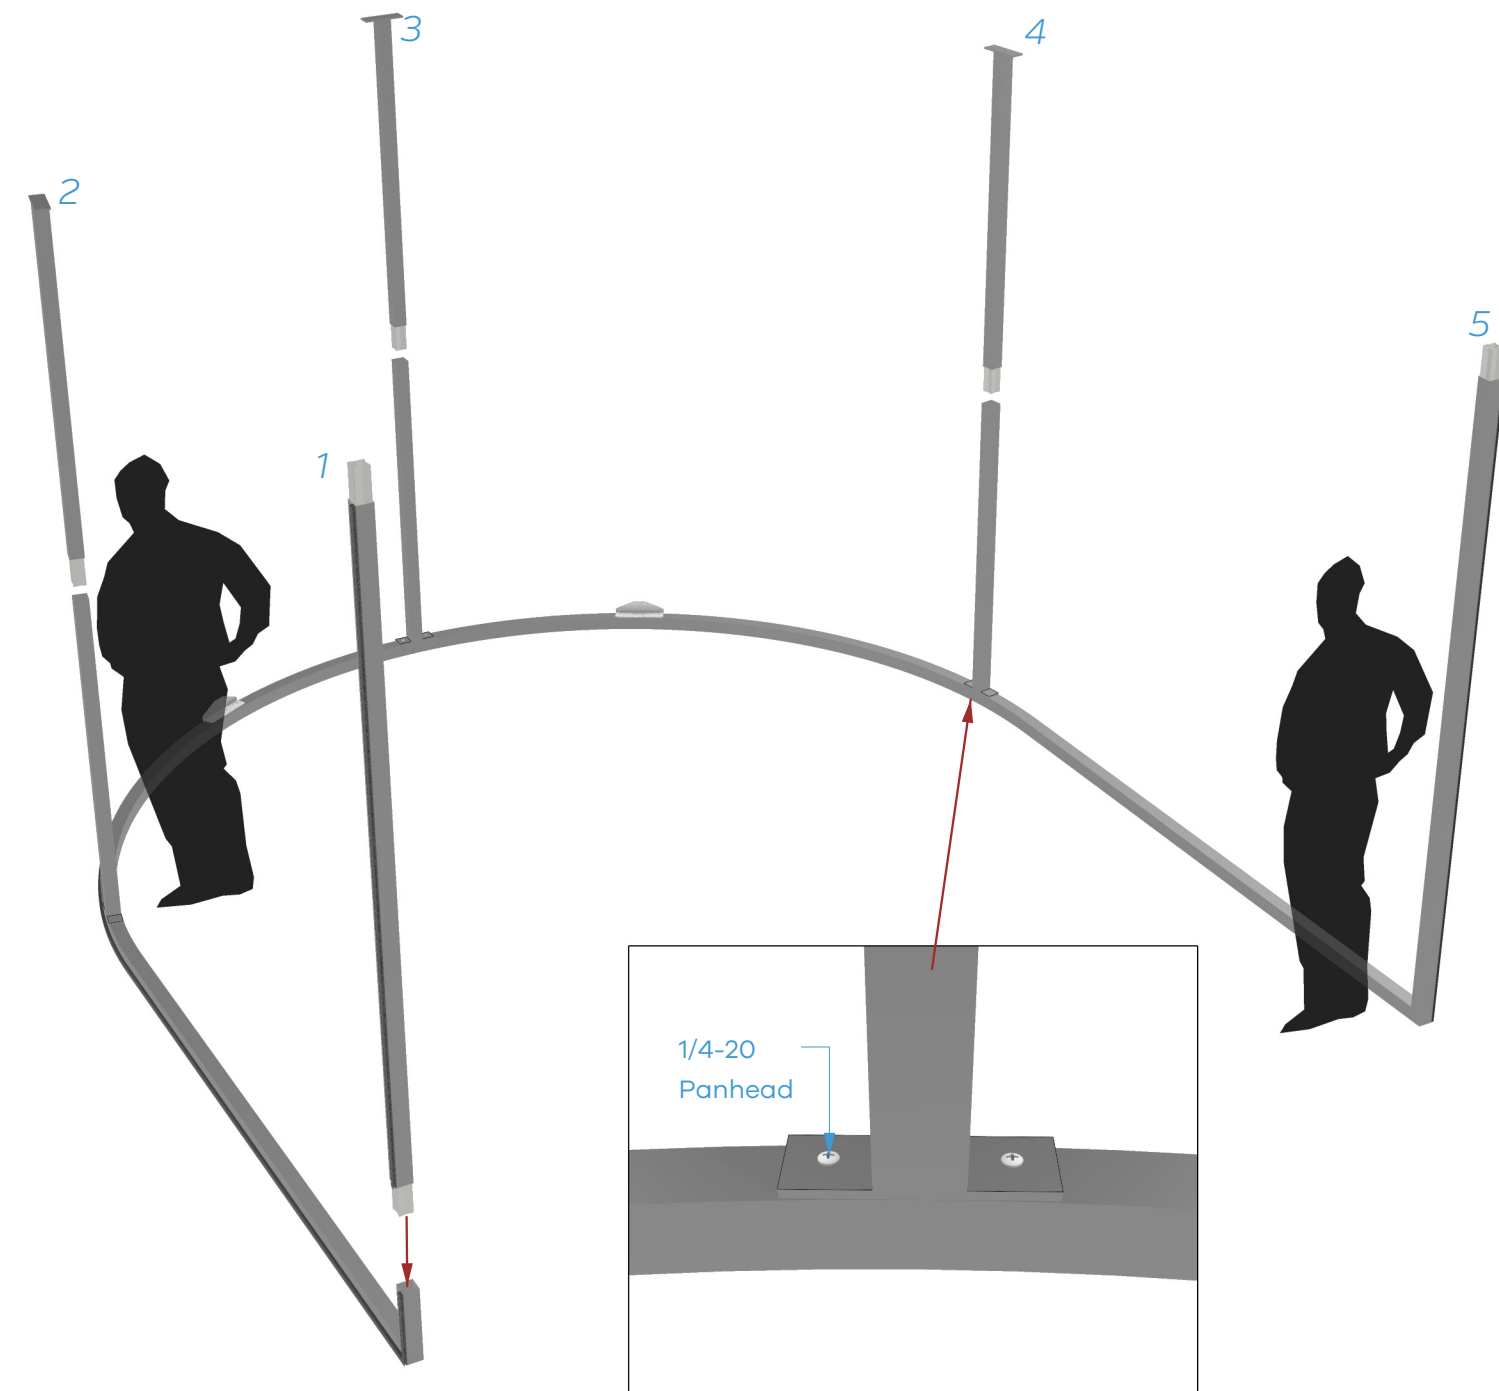

On a clean working surface, construct the bottom arc of the custom frame.
Using the label system to match corresponding parts.
Specific joint labels can be found in your design drawing set.

Perspective

3

Fasten your vertical struts to the frame fully constructed bottom arc.

4

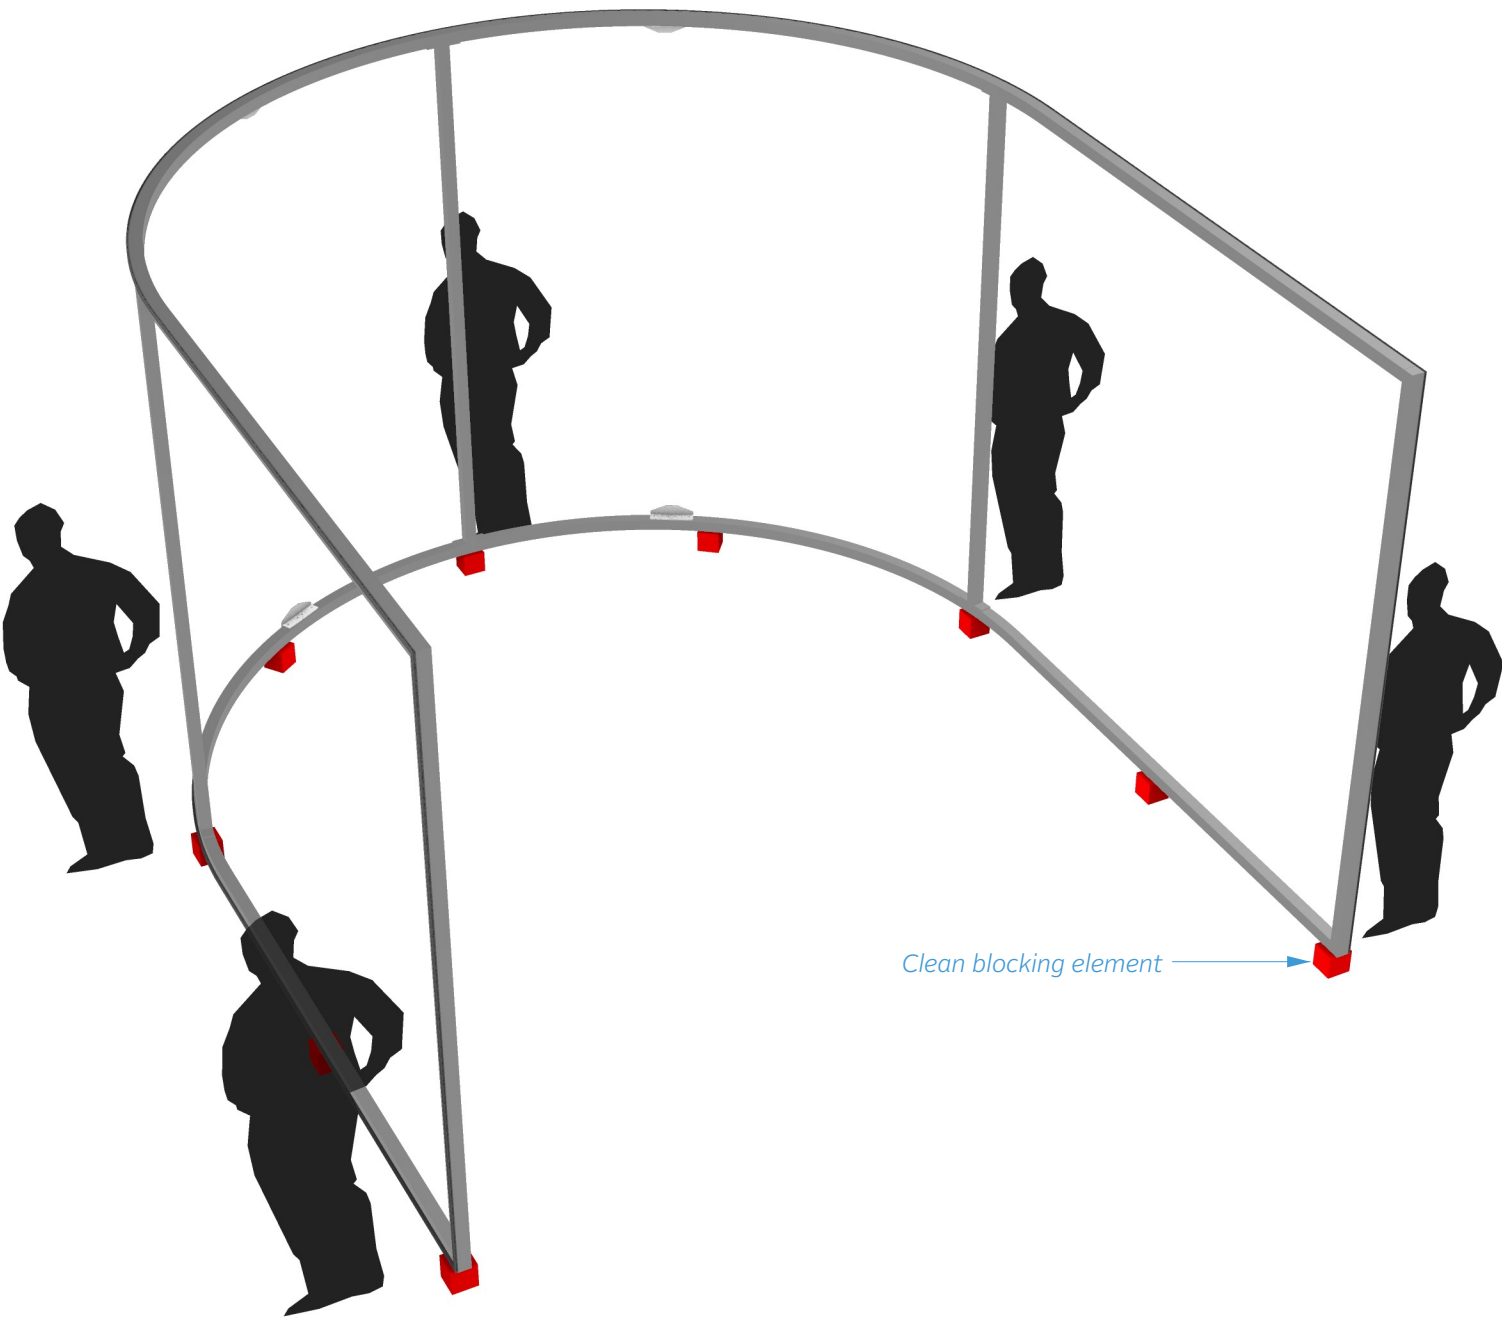

Fasten all the upper arc sections to the frame.
Check that all joints have their corresponding fasteners, and are firmly tightened.

Perspective

5

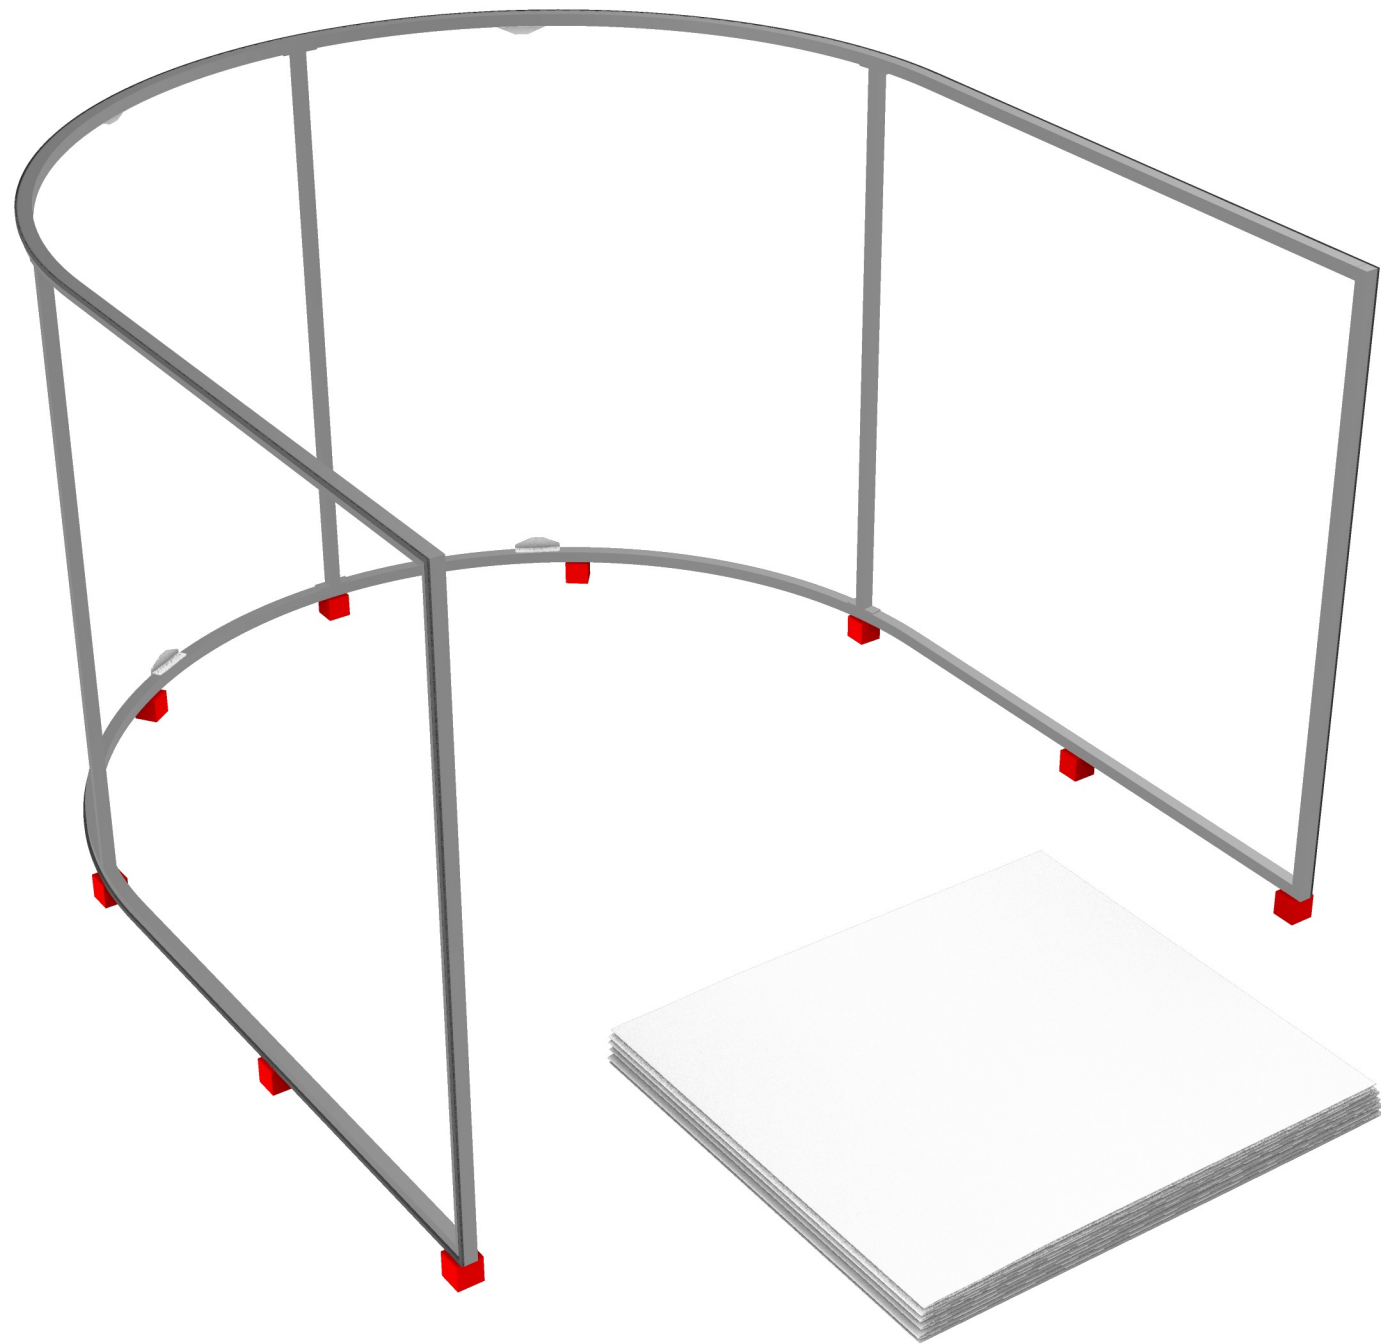

With the help of some friends, lift the completed frame off of the ground and onto an elevated working surface. This can be achieved with clean wooden blocks, sawhorses, or other methods.
This will allow fabric to properly wrap around the fabric during the installation process.

Perspective

6

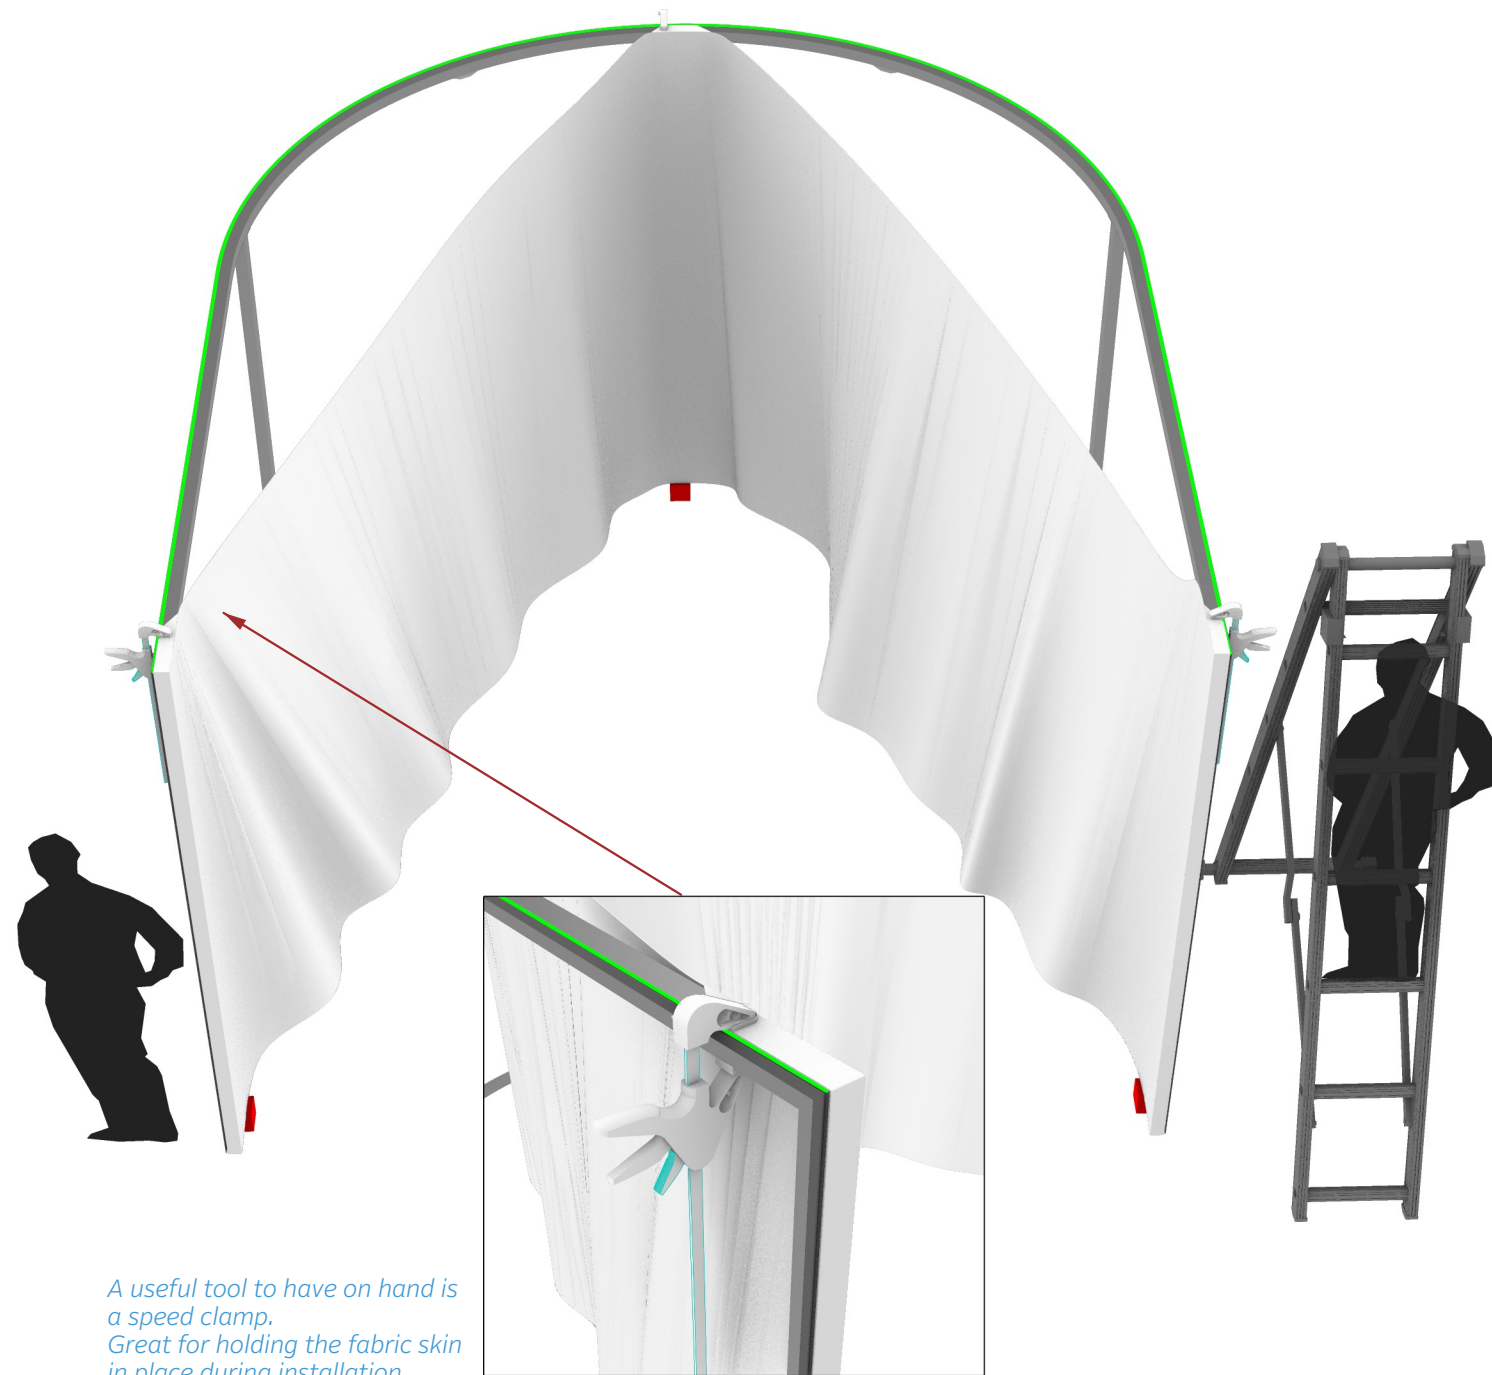

Lay your fabric skin out onto a clean working surface.

Perspective

7

Apply the fabric skin to the frame by inserting the sewn-on silicone edge into the aluminium channel (green). Start with the front corners/edges. Find the approximate middle of the fabric skin and insert it into the channel.

A useful tool to have on hand is a speed clamp. Great for holding the fabric skin in place during installation.

Perspective

8

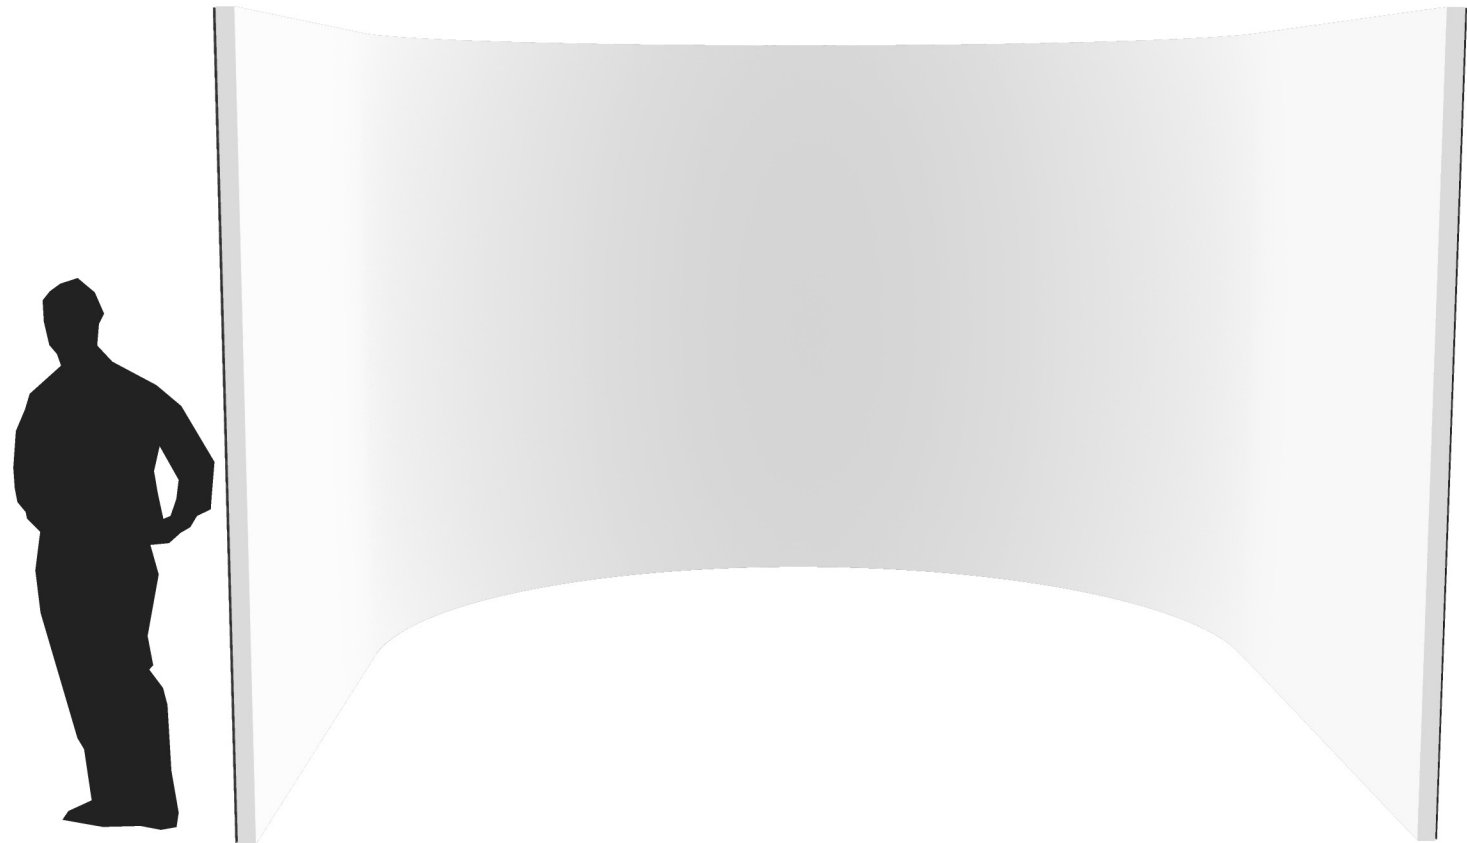

Continue applying the fabric skin, working together to insert the fabric if necessary.

Perspective

9

Remove your blocking devices and clamps.
With a team, lower the completed frame to the ground.
