1

Assemble your desired truss structure to design spec and proper truss safety standards.  
Ballasting pictured below is representational only.

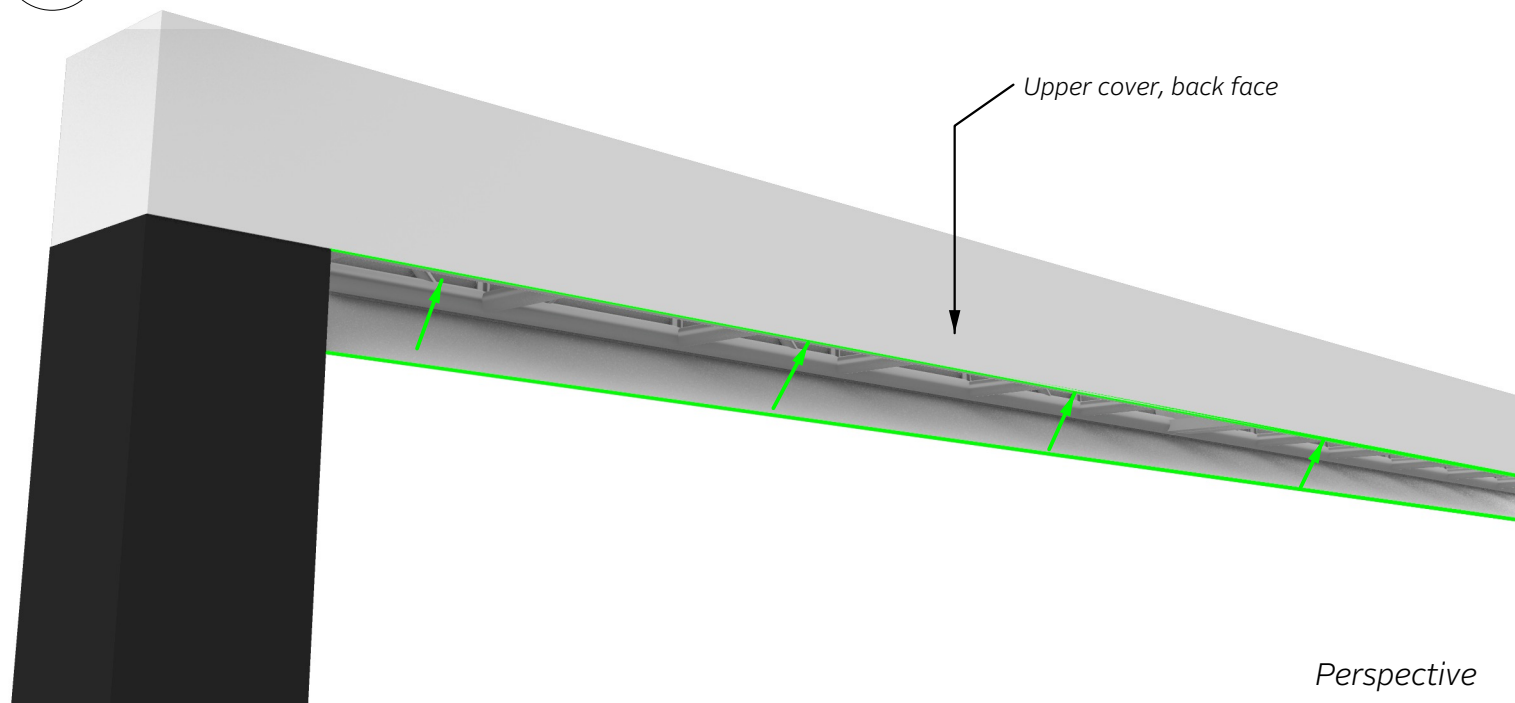

2

Apply the truss covers to the legs of the structure using the hook and loop enclosure.  
When installing, orient the covers so the ring of extra HOOK is towards the top of the structure.  
This will be used to attach the upper cover.

3

Apply the upper cover to the truss span.  
First, along the back face apply the hook and loop enclosure.

4

Finally, attach the loop from the upper cover to the hook of the lower covers.  
The enclosure should attach all the way around each truss leg.
